

TDM-100 LED Timer Display

Overview

The TDM-100 LED based timer display shows the VoteLynx Up/Down presentation timer minutes & seconds count to presenters and audience in the meeting room. Large red, yellow, and green LED lamps indicate start, stop and wrap-up cues. The timer displays give presenters a visual status of how much time they have to speak during the meeting.

Model TDM-100 with 0.56" high digits is designed for podium or desk mounting and fits into a standard two gang electrical cutout.

The timer display modules may be used in any VoteLynx system configuration. One or more timer displays may be connected together. For example, one timer display could be located on the podium top surface for a presenter to see while another display could be located on the rear of the podium for meeting members at the dais to see.

TDM-100 LED Timer Display

Features

- Large bright green numbers show timer count
